

Studying for Science Example

Look through your child's science notebook (bookmark on their chromebook) for the focus question (phenomenon). This is what we learned from the lessons of the week. Choose a focus question and ask them how they learned this in class. They should try to use their word bank in their answers.

Example:

What causes water to flow?

-

Explanation

Water flows down a slope.
Bigger domes of water move
faster. Water flows down a
steeper slope faster.

Students should be practicing their quizlet once a week using learn. If they have completed learn, they may play some of the quizlet games.
